

Pet Tracker Application for Improved Pet Safety and Security

Client: The client is a pet shop owner who operates several pet shops across different locations throughout the USA.

Business Challenge:

The client wanted to improve the safety and well-being of their customers' furry companions by developing a pet tracker app that would allow pet owners to monitor their pets' whereabouts and receive alerts in case of any potential danger or emergencies. Additionally, the client aims to develop a mobile application that will simplify the process of scheduling appointments, ordering supplies, and accessing personalized pet care information for their customers.

Solution Delivered:

After a complete analysis, we decided to create a mobile application that works on both android and iOS platforms. Our developers created a user-friendly mobile application that allows pet owners to schedule appointments, order supplies, and access personalized pet care information. The pet tracker's key feature of the mobile application, enables pet owners to monitor their pets' whereabouts and receive alerts in case of any potential danger or emergencies. It also helps on the client end such as integrating with the client's existing point-of-sale systems and provides real-time insights into inventory management, customer preferences, and pet health records. More business benefits are discussed below.

Business Benefits:

With our pet tracker app, here are some potential business benefits such as:

-  Access personalized pet care information
-  Save time and reduce stress for both pet owners and pet care providers
-  Real-time insights into inventory management and customer preferences
-  Real-time alerts
-  Improved Operational Efficiency
-  Data analytics for understanding end clients
-  Increased safety for the end client
-  Ease of use on both android and iOS platforms
-  Enhanced bonding and health monitoring
-  Peace of mind

Technologies Used:

MQTT

python™

HTML

CSS

JS
