

Webgility API Integration in Magento Ecommerce Website

Client:

The client is a reputed manufacturer and reseller of armaments in the United States.

Business Challenge:

Our client wanted a highly customized and personalized solution to manage their e-commerce and bookkeeping in a single and automated Solution. Additional requirements of the client are:

1. They want a solution to Manage orders, accounting, inventory, and shipping on a single Application.
2. Sync the inventory tracking based on sales through the client's e-commerce website.
3. Sync the Shipping information and tracking records automatically.
4. Sync the process of payment through Credit card automatically.
5. The Application should follow the PCI compliance to store the credit card details.
6. They wanted an invoice to be generated after placing the order and the details should get updated to the bookkeeping automatically.
7. Track every single transaction detail like the buyer, address, discounts, promotion codes, sales tax, shipping method, payment method, etc. should be tracked automatically.
8. The Application should allow the whole team to collaborate using a single set of data with no manual entry.

Solution Delivered:

After analyzing the business challenges and all their above requirements, our team proposed a Webgility API Integration in Magento Ecommerce website which helps them manage all their sales, orders, bookkeeping, and freight management in a single Automated system.

Business Benefits:

Our Webgility API Integration in Magento Ecommerce website was able to achieve successfully what the client asked for:

-  Order Management
-  Inventory Management
-  Account Management
-  Tracking and shipping details
-  Secured Payment gateway
-  Powerful tracking analytics for every transaction

And more
