

Next-Gen AI Powered ChatBot

Client:

The client is an ISV located in the US.

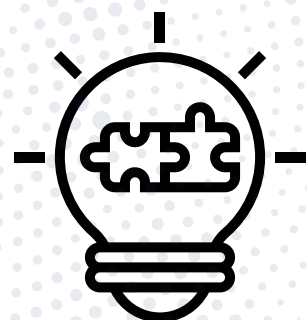

Business Challenge:

Our client wanted to develop AI powered ChatBot that works with all the platforms. The Additional requirements of ChatBot are:

- Intractable ChatBot with document upload option.
- Analyses documents within minutes, and creates a digital brain.
- Instant Communication.
- And more...

Solution Delivered:

After a complete analysis of their business challenges and all their above requirements, our team came up with developing AI Powered ChatBot which helps replying with the best answers in real time. Using the ChatBot user can raise any type of queries either through voice, or text. Implementing web scraping and Natural language processing techniques provides the exact solution matching with real time.

Business Benefits:

With our AI based technologies and natural language processing, we delivered a highly personalized AI powered ChatBot that was able to achieve what the client asked for:

-  24/7 High quality support and guidance
 -  Strengthening your decisions
 -  Personalized recommendations
 -  Fast at searching data required
 -  Remarkable and fast experience
 -  Easy Integration and User friendly
- And More...

Technologies Used:

Core language

Python 3.8

Dependencies

rasa 2.3.1, fasttext 0.9.2, Django

Database

PostgreSQL, Elastic Search

Deploy

Docker
